

**FAASTeam presents:**

# **Madison IFR Club**

ATC's vectors to final routinely make approaches simpler for the pilot and all controllers to move more airplanes from the sky to the runway in quick succession. The problem comes when a last-minute change requires reprogramming the avionics and another airplane closing in means there isn't much time to get the right waypoints in the right places.

Members discuss short videos and how they would respond to the given scenario(s). This is an open forum for free ideas and we all learn from shared experience! All are welcome to join in.

Prior to attending a safety seminar please review and abide by current CDC, State and Local health guidelines.

**Directions:** Wisconsin Aviation  
3606 Corben Court  
Madison, WI 53704  
Conference Room
